"Isolation, cloning and expression of cryV gene.";
"usolation, cloning and expression of cryV gene.";
submitted (C-1996) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut
-!- polithelial cells of certain coleopteran and lepidopteran species.
Active on Plutella xylostella and Benbyx mori.
-!- DEVELOPMENTAL STAGE: The crystal protein is produced during sporulation and is accumulated both as an inclusion and as part of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        QTGIGIAGKILGTLGVPFAGQVASLYSFILGELWPKGKNQWEIFMEHVEEIINQKISTYA

Pesticidial crystal protein cryllb (Insecticidal delta-endotoxin Cryll(b)) (Crystaline entomocidal protoxin) (81 kDa crystal protein) Names-cryllb, Synonyms=cryllb, cryv, cryv465;
Bacillus thuringiensis (subsp. entomocidus).
Bacteria, Firmicutes; Bacillales; Bacillaceae; Bacillus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Appl. Environ. Microbiol. 61:2402-2407(1995).

-I- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut epithelial cells of certain coleopteran and lepidopteran species. Active on Plutella xylostella but not on Bombyx mori.

-I- DEVELOPMENTAL STAGE: The crystal protein is produced during sporulation and is accumulated both as an inclusion and as part of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the spore coat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

Bacillus thuringiensis cryet4 and cryet5 toxin genes and proteins toxic to legidopteran insects.";
Patent number US5322687, 21-UUW-1994.
-:-FUNCTION: Promotes colloidosmotic lysis by binding to the midgut epithalial cells of many lepidopteran larvae.
-:-PUNCTION: The crystal protein is produced during sporulation and is accumulated both as an inclusion and as part of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the spore coat.

Pesticidial crystal protein crylBc (Insecticidal delta-endotoxin
CrylBlc)) (Crystaline encomocidal protoxin) (140 kDa crystal protein)
Name-crylBc; Synonyms-crylB(c), CrylBc;
Bacillus thuringiensis (subsp. morrisoni).
                                                                                                                                       SSNAKVDKISTDSLKN-ETDIELQ-NINHEDCLKMSEYENVEPFVSASTIQTGIAGKI

The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which are insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel insecticidal protein obtained from species of Paecilomyces for controlling insects, and for insect-resistant transgenic plant production.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Aae16272 B. thurin

The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal crystal endotoxin (CRY) protein. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TGTFGDIRVNINPPFAQRYRVRIRYASTTDLQFHTSINGKAINQGNFSATWNRGEDLDYK 600

```
The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal crystal endotoxin (CRY) protein. This
                                                                                                                                                                                                                                                                                                              999

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which are insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            QTGIGLAGKILGTLGVPFAGQVASLYSFILGELWPKGKNQWEIFMEHVEEIINQKISTYA 120

New hybrid Bacillus thuringiensis hybrid toxins comprising structural domains derived from at least 2 different crystal proteins, such as Crylla and CrylBa, and having insecticidal activity, useful for combating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The sequence is B. thuringiensis (Bt) crystal protein Crylla, the DNA encoding which was mutated to allow cloning of domain II or domains I and II, to make the hybrid protoxins of the invention. The hybrid toxins of the invention, having structural domains I, II and III in this order starting from the N-terminal derived from at least 2 different crystal proteins, are useful for protecting plants against pest insects, e.g. moths, butterflies and Colorado potato beetle or for combating insects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ASHVKALVYSWTHRSADRINTIEPNSITQIPLVKAFNLSSGAAVVRGPGFTGGDILRRIN

Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistent to insects. The protein or synergistic combination is useful an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             B. thuringiensis insecticidal crystal endotoxin (CRY) protein, crylla5.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                        719
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RNKALTDLKGLGDALAVYHDSLESWVGNRNNTRARSVVRSQYIALELMFVQKLPSFAVSG

                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     VDFHWKFVTHPIASDNFYYPGYAGIGTQLQDSENELPPEATGQPNYESYSHRLSHIGLIS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal crivity. The present sequence is sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RNKALTDLKGLGDALAVYHDSLESWVGNRNNTRARSVVKSQYIALBLMFVQKLPSFAVSG 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           099
be used to produce transformants B.coli strain MC12022/pJH12 (NCIB 40278, or bacteriophage EMBL4 vector (NCIB 40279) or E.coli strain BL21/pJH11 (NCIB 40275). The delta-endo- toxin produced by the transformants can be used in formulations for combatting Lepidoptera and Coleoptera pests. (Updated on 25-WAR-2003 to correct PA field.) motif at the amino-terminus. Polynucleotide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or synergistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiensis insecticidal crystal endotoxin (CRY) protein. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to novel insecticidal proteins obtained from Paecilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which insect-resistant. Also, the insectidal proteins are useful for controlling insects by providing them at a locus where insects feed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RNKALTDLKGLGDALAVYHDSLESWVGNRNNTRARSVVKSQYIALELMFVQKLPSFAVSG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              999
                                                                                                                                                                                                             9
        The invention relates to a novel Bacillus thuringiensis cryl gene, gene combination, expression vector, nucleotide sequence of the B thuringiensis cryl gene with high-toxicity to lepidoptera pests and the amino acid sequence of the protein encoded by it, cooperative use of the cryl gene with the expression product of crylAb or crylBa, primer sequences for expressing the genes, and the constructed shuttle vector pSX412b. The gene in combination with the crylAb or crylBa genes displays high toxicity to the lepidoptera, coleoptera and diptera pests. The present sequence represents the crylIel protein.
                                                                                                                                                                                                                                     60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TALFTSTNPRGLKTDVKDYHIDQVSNLVESLSDEFYLDEKRELFEIVKYAKQLHIBRNM 719

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to novel insecticidal proteins obtained from Paccilomyces sp. (see AAB66899 to AAB66901 and AAB66913). The insecticidal proteins can be used to produce transgenic plants, which insect-resistant. Also, the insecticidal proteins are useful for controlling insects by providing them at a locus where insects feed

The invention relates to insecticidal protein comprising an X-glycine motif at the amino-terminus. Polynuclectide or DNA constructs of the invention are useful for producing plants or plant parts that are resistant to insects. The protein or smegistic combination is useful as an active ingredient of a pesticide or for controlling insects. Antibodies raised to the insecticidal proteins can be used to identify other proteins with insecticidal activity. The present sequence is Bacillus thuringiens insecticidal crivity are present sequence is sequence is used in the invention
